1 Problem summary

Four

L=78125

$2 = 78125$ (7 points)

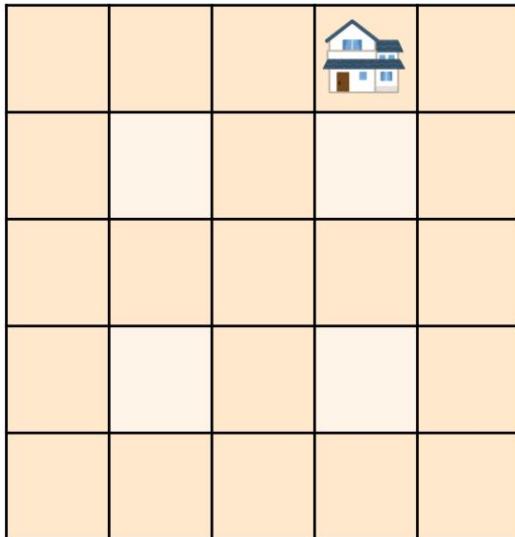

typical

= 1 and other special

consider the case

2 = 78125 (7 points)

Can't you solve it when = 1?

2 = 78125 (7 points)

Can't you solve it when = 1?

0	0	0			2
0	0	0	1	2	
0	0	0	1	2	
0	0	0	1	2	
0	0	0	1	2	

For each square,

``What action should I take when starting from that square?

Is that okay?"

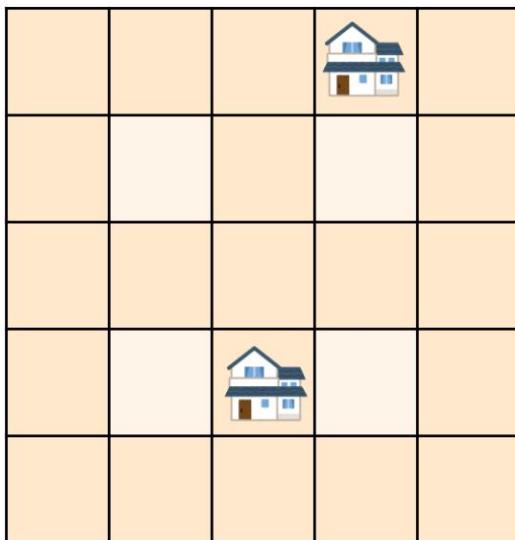

Just write it on the flag (= 5)

*Accurately, it is 1-indexed, so do not record 0.

*This explanation is 0-indexed for ease of understanding.

$2 = 78125$ (7 points)

Can't you solve it when it is general?

$2 = 78125$ (7 points)

Can't you solve it when it is general?

Let's consider the actions for each candidate.

0	0	5	11	12	

Action for candidate 0 Action for candidate 1

$2 = 78125$ (7 points)

What is the value of ?

It will be a 7-digit quintal integer, so the maximum value is

=

You can get 7 points so far .

L=45056

$2 = 78125$ (7 points)

typical

the number of possible states

estimate

$2 = 45056$ (13 points)

Do the following cases exist?

Candidate 0: Act on square (,) 4

Candidate 1: Act on square (,)

4 Candidate 2: Act on square (,) 4

:

Candidate 6: Act on square (,) 4

$2 = 45056$ (13 points)

Do the following cases exist?

Candidate 0: Act on square $(,) 4 \ddot{y} (0, 0) = (,)$

Candidate 1: Act on square $(,) 4 \ddot{y} (1, 1) = (,)$

Candidate 2: Act on square $(,) 4 \ddot{y} (\text{twenty two}) = (,)$

:

:

Candidate 6: Act on square $(,) 4 \ddot{y} (6, 6) = (,)$

$2 = 45056$ (13 points)

Do the following cases exist?

Candidate 0: Act on square $(,) 4 \ddot{\text{y}} (0, 0) = (,)$

Candidate 1: **Since** $(,) 4 \ddot{\text{y}} (1, 1) = (,)$

Candidate 2: Act on square $(,) 4 \ddot{\text{y}} (\text{twenty two}) = (,)$

Such a case does not exist!

Candidate 6: Act on square $(,) 4 \ddot{\text{y}} (6, 6) = (,)$

$$2 = 45056 \text{ (13 points)}$$

Basically, action 4 never appears more than once.

Therefore, we need to find a number such that 0 \leq 4 and there are no more than 2 such that = 4.

The number of ways in column (0, 1, ..., 6) is 45056 ways

If you assign an ID to each number sequence in advance,

$$= 45056 \text{ (scores 13 points)}$$

L=2187

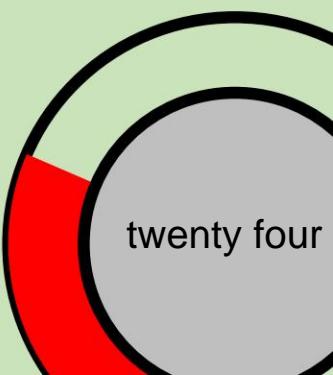

3 = 2187 (19 points)

typical

= 1 and other special

consider the case

twenty four

3 = 2187 (19 points)

If = 1, can you solve it by = 3 ?

twenty five

$3 = 2187$ (19 points)

typical

Record distance mod 3

* JOI 2020 “Stray Cat” 15 points solution

3 = 2187 (19 points)

Consider writing the shortest distance 3 from the candidate house.

2	1	0	1	2		
1	0	2	0	1		
0	2	1	2	0		
twenty one			1	2		
0	2	1	2	0		

Integer written by Anna

$3 = 2187$ (19 points)

Consider writing the shortest distance 3 from the candidate house.

	2	1	0	1	2		
	1	0	2	0	1		
	0	2	1	2	0		
	twenty one				1	2	
	0	2	1	2	0		

An integer written by Anna An integer seen by Bruno

2	1	0	1	2		
1	0	2	0	1		
0	2	1	2	0		
2	1	0	1	2		
0	2	1	2	0		

There are four adjacent integers: (1, 0, 0, 0). The shortest distance is 3
 If 2 > 1, the distance
 is smaller, so the one with 1
 Move in the direction.

3 = 2187 (19 points)

Finally, as with the 7-point solution method, think in ternary numbers, and then put an integer on the flag.

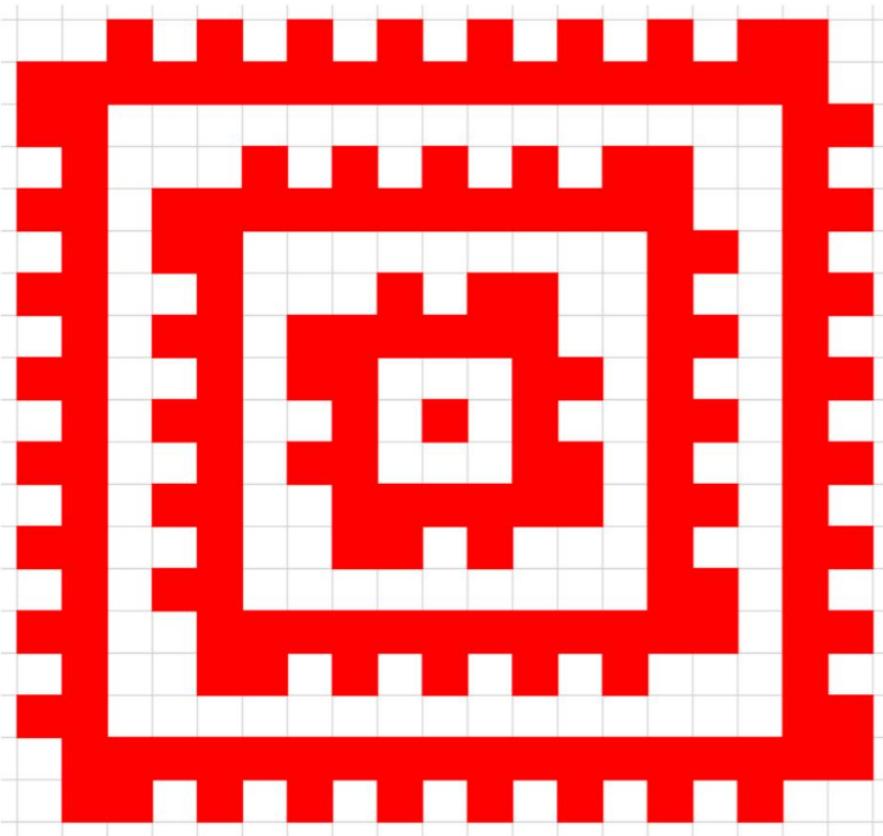

Think about writing. At that time, the value of is

=

You can get 19 points so far.

L=128

4 = 128 (39 points)

Record the number on the flag as shown on the left.

and solve for = 2 when = 1
can do

Then convert it to binary notation

$$= 2^7 = 128$$

L=14

5 = 14 (75 points)

In the previous solution method, each square was recorded, but only one square was recorded.

It seems obvious that it would be wasteful to record information on

ÿ “What information should be recorded” for each square

Can't you separate the roles?

$5 = 14$ (75 points)

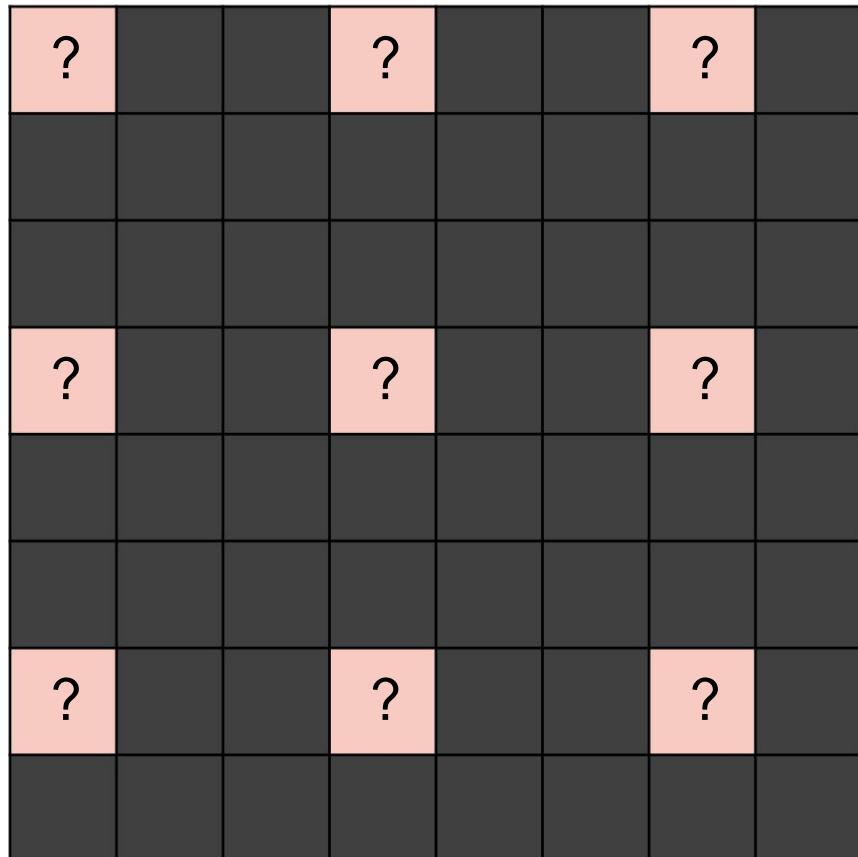

In the previous solution method, each square was recorded, but only one square was recorded.

It seems obvious that it would be wasteful to record information on

Typical = Special such as 1
“What information
should be recorded” for each square

Can't you separate the roles?
consider the case

$5 = 14$ (75 points)

= 1, and if the squares are (,), the flags will , but

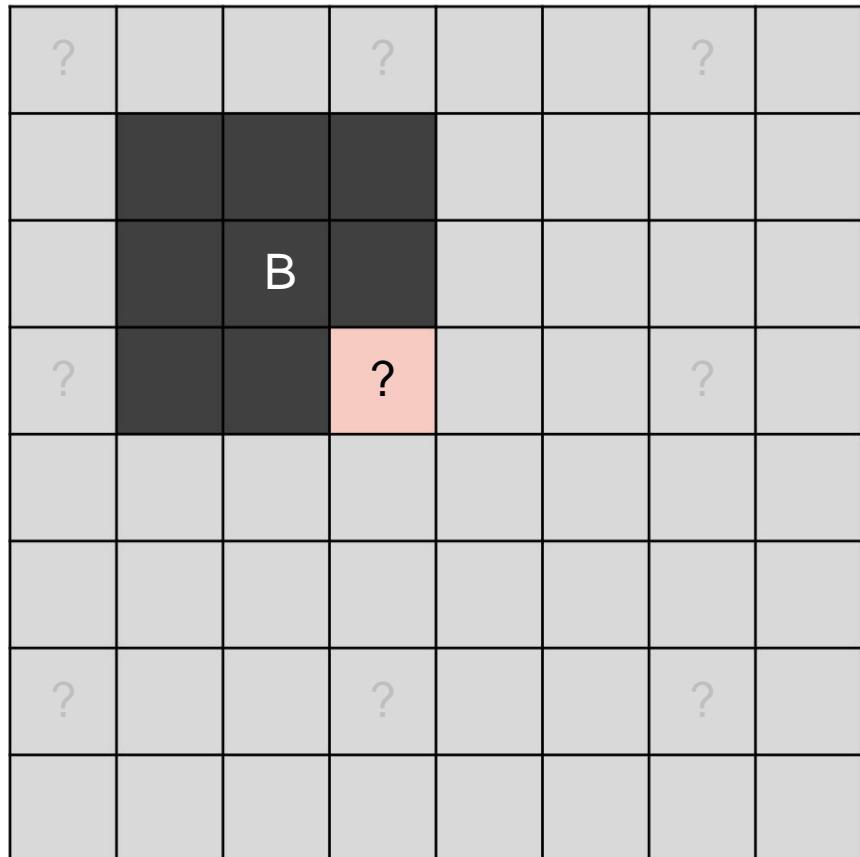

only be numbered in squares that are multiples of both 3 .

Consider a case where it is not possible to record

*The integers written on the flags of other squares are 0.

think as

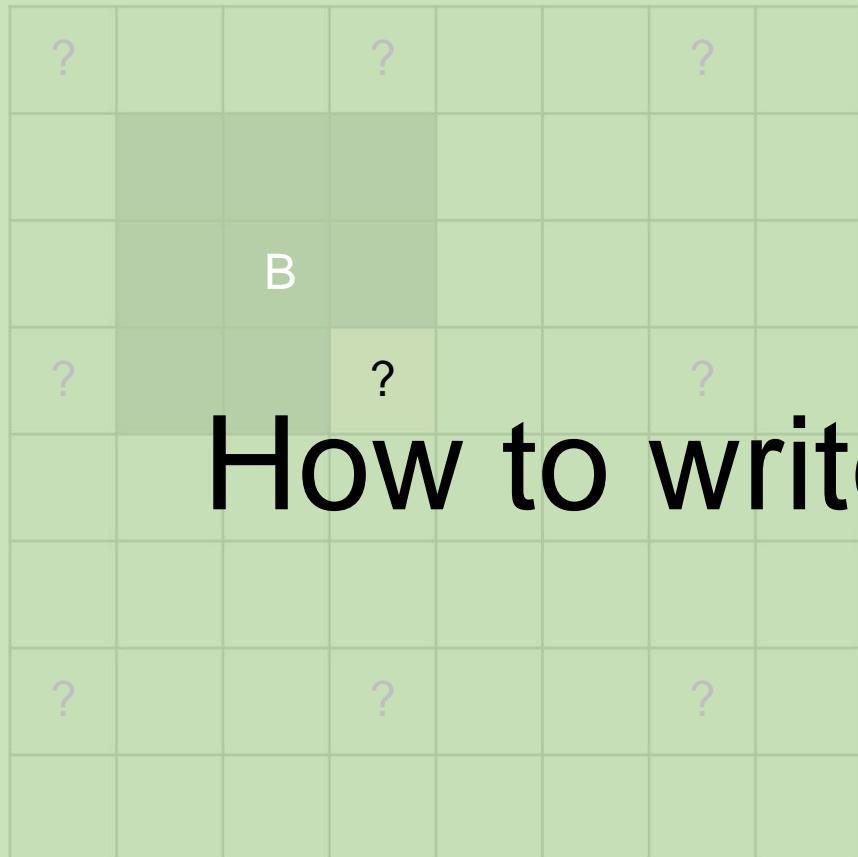

$5 = 14$ (75 points)

At that time, Bruno always has one
"A square with an integer written on the flag"
exists

Look only at the integer written on this square,
have to decide the answer

$5 = 14$ (75 points)

How to write an integer to a flag?

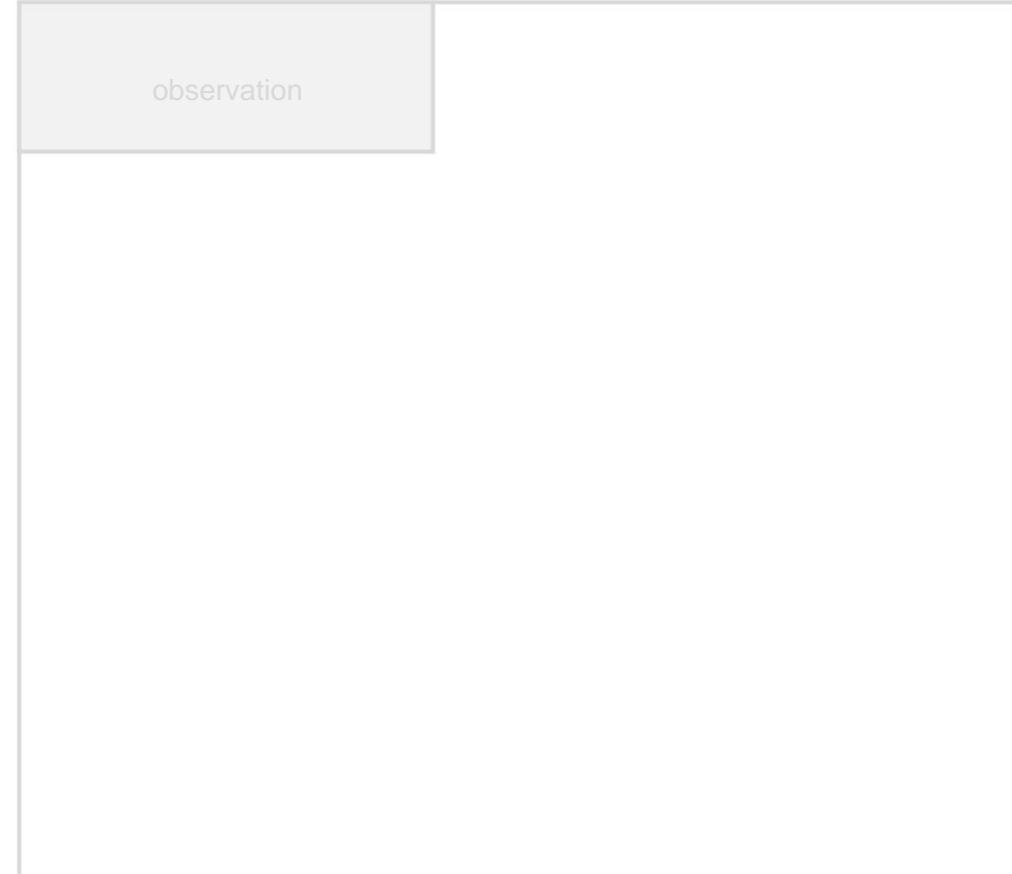

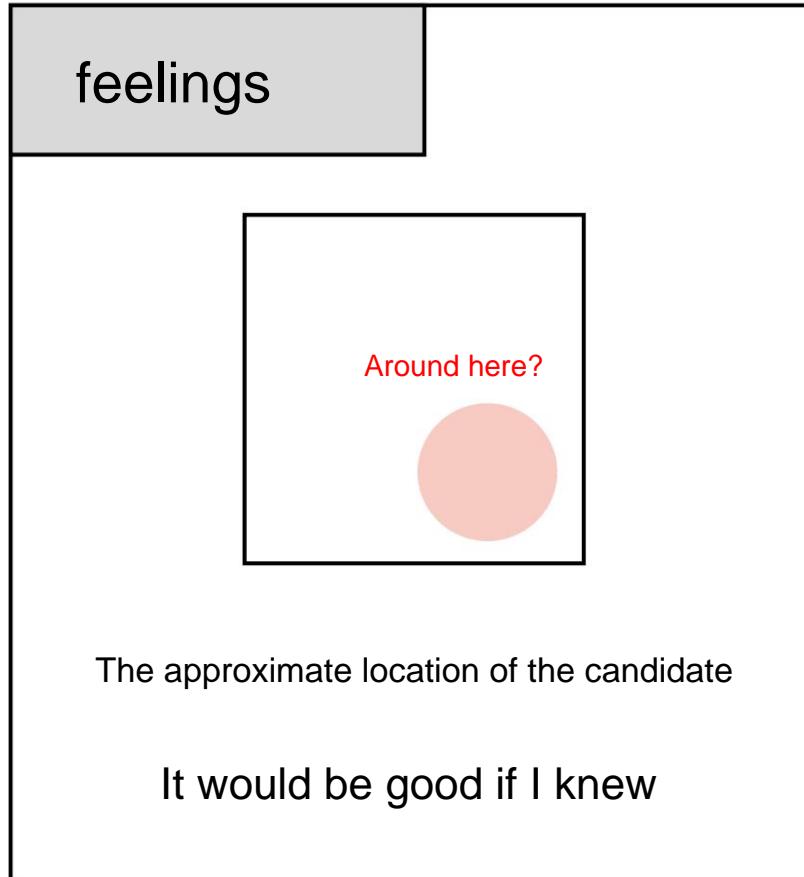

At that time, Bruno always has one

Bruno implementation

3

generalized to = 7

5 = 14 (75 points) Anna

If we record separate values with = 1, we get:

16	15	47	46	44	39	38		
17	14	48	11	45	40	37		
18	49	1	2	3	41	36		
19	13	4th grade	6	10	35			
20	12	7	8	9	43	34		
21	23	25	12	31	32	33		
22	24	26	27	28	29	30		

5 = 14 (75 points) Anna

If the coordinates are greater than 2, use the same number

16	15	47	46	44	10	10		
17	14	48	11	45	10	10		
18	49	1	2	3	10	10		
19	13	4th grade	6	10	10			
20	12	7	8	9	10	10		
21	23	25	12	31	10	10		
22	24	26	27	28	10	10		

5 = 14 (75 points) Anna

If the coordinates are smaller than 2, use the same number

13	13	47	46	44	10	10		
13	13	48	11	45	10	10		
13	13	1	2	3	10	10		
13	13	4th grade	6	10	10			
13	13	7	8	9	10	10		
13	13	25	12	31	10	10		
13	13	26	27	28	10	10		

5 = 14 (75 points) Anna

If the coordinates are greater than 2, use the same number

13	13	11	11	11	10	10		
13	13	11	11	11	10	10		
13	13	1	2	3	10	10		
13	13	4th grade	6	10	10			
13	13	7	8	9	10	10		
13	13	25	12	31	10	10		
13	13	26	27	28	10	10		

5 = 14 (75 points) Anna

If the coordinates are smaller than 2, use the same number

13	13	11	11	11	10	10		
13	13	11	11	11	10	10		
13	13	1	2	3	10	10		
13	13	4th grade	6	10	10			
13	13	7	8	9	10	10		
13	13	12	12	12	10	10		
13	13	12	12	12	10	10		

5 = 14 (75 points) Anna

In the end, Anna can just write an integer like this (if the candidate is in the middle)

13	13	11	11	11	10	10		
13	13	11	11	11	10	10		
13	13	1	2	3	10	10		
13	13	4th grade	6	10	10			
13	13	7	8	9	10	10		
13	13	12	12	12	10	10		
13	13	12	12	12	10	10		

5 = 14 (75 points) Anna

If the coordinates are smaller than 2, use the same number

13	13	11	11	11	10	10		
13	13	11	11	11	10	10		
13	13	12	3	10	10			
13	13	4th grade	6	10	10			
13	13	7	8	9	10	10		
13	13	12	12	12	10	10		
13	13	12	12	12	10	10		

$5 = 14$ (75 points)

Anna's implementation

2

Bruno implementation

3

generalized to = 7

5 = 14 (75 points) Bruno

13	13	11	11	11	10	10		
13	13	11	11	11	10	10		
13	13	1		2	3	10	10	
13	13	4th grade	6	10	10			
13	13	7	8	9	10	10		
13	13	12	12	12	10	10		
13	13	12	12	12	10	10		

Finally, Bruno's implementation is as follows:

- Ten always go to the right
- 11 always go left
- 12 definitely go down
- 13 definitely go to the top
- other Position relative to the flag
Calculate and judge from

5 = 14 (75 points) Bruno

13	13	11	11	11	10	10		
13	13	11	11	11	10	10		
13	13	1		2	3	10	10	
13	13	4th grade	6	10	10			
13	13	7	8	9	10	10		
13	13	12	12	12	10	10		
13	13	12	12	12	10	10		

For example, if Bruno is on 1, 5

5 = 14 (75 points) Bruno

13	13	11	11	11	10	10		
13	13	11	11	11	10	10		
13	13	1		2	3	10	10	
13	13	4th grade	6	10	10			
13	13	7	8	9	10	10		
13	13	12	12	12	10	10		
13	13	12	12	12	10	10		

For example, if Bruno is on 1, 5

You can see a flag with the integer 11 written on it.

5 = 14 (75 points) Bruno

13	13	11	11	11	10	10		
13	13	11	11	11	10	10		
13	13	1		2	3	10	10	
13	13	4th grade	6	10	10			
13	13	7	8	9	10	10		
13	13	12	12	12	10	10		
13	13	12	12	12	10	10		

For example, if Bruno is on 1, 5

You can see a flag with the integer 11 written on it.

I know I should go below.

5 = 14 (75 points) Bruno

13	13	11	11	11	10	10		
13	13	11	11	11	10	10		
13	13	1		2	3	10	10	
13	13	4th grade	6	10	10			
13	13	7	8	9	10	10		
13	13	12	12	12	10	10		
13	13	12	12	12	10	10		

For example, if Bruno is on 4, 3

5 = 14 (75 points) Bruno

13	13	11	11	11	10	10		
13	13	11	11	11	10	10		
13	13	1		2	3	10	10	
13	13	4th grade	6	10	10			
13	13	7	8	9	10	10		
13	13	12	12	12	10	10		
13	13	12	12	12	10	10		

For example, if Bruno is on 4, 3

You can see a flag with the integer 9 written on it.

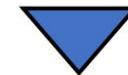

5 = 14 (75 points) Bruno

13	13	11	11	11	10	10		
13	13	11	11	11	10	10		
13	13	1		2	3	10	10	
13	13	4th grade	6	10	10			
13	13	7	8	9	10	10		
13	13	12	12	12	10	10		
13	13	12	12	12	10	10		

For example, if Bruno is on 4, 3

You can see a flag with the integer 9 written on it.

Since the flag is at $(+1, \pm 0)$ from Bruno's point of view, the candidate should move upwards at $(0, \pm 1)$ from Bruno's point of view.

$5 = 14$ (75 points)

1

Anna's implementation

2

Bruno implementation

3

generalized to = 7

$5 = 14$ (75 points) when $K=7$

If = 7

Consider recording candidate information as shown in the table below.

Candidate 0	Candidate 1	Candidate 2	Candidate 0	Candidate 1	Candidate 2	Candidate 0	Candidate 1
Candidate 3	Candidate 4	Candidate 5	Candidate 3	Candidate 4	Candidate 5	Candidate 3	Candidate 4
Candidate 6			Candidate 6			Candidate 6	
Candidate 0	Candidate 1	Candidate 2	Candidate 0	Candidate 1	Candidate 2	Candidate 0	Candidate 1

$5 = 14$ (75 points) when $K=7$

Every 3×3 square contains all information for candidates 0 to 6.

Bruno can answer correctly because

Candidate 0	Candidate 1	Candidate 2	Candidate 0	Candidate 1	Candidate 2	Candidate 0	Candidate 1
Candidate 3	Candidate 4	Candidate 5	Candidate 3	Candidate 4	Candidate 5	Candidate 3	Candidate 4
Candidate 6			Candidate 6			Candidate 6	
Candidate 0	Candidate 1	Candidate 2	Candidate 0	Candidate 1	Candidate 2	Candidate 0	Candidate 1

$5 = 14$ (75 points) when K=7

Record an integer between 1 and 13 in squares 0 to 6.

You can do this by **recording 14 on one of the empty squares.**

(Depending on the location of the empty squares, which squares contain information about which candidates.

(you can see if there is)

You can get **75** points so far.

Candidate	Candidate	Candidate
0	1	2

9 is not used in at least 2 out of 9 ways

$7 = 12$ (100 points)

Therefore, the maximum value of **12** can be achieved with the following steps

Search all 9 ways and find a way to write it that doesn't use "9"

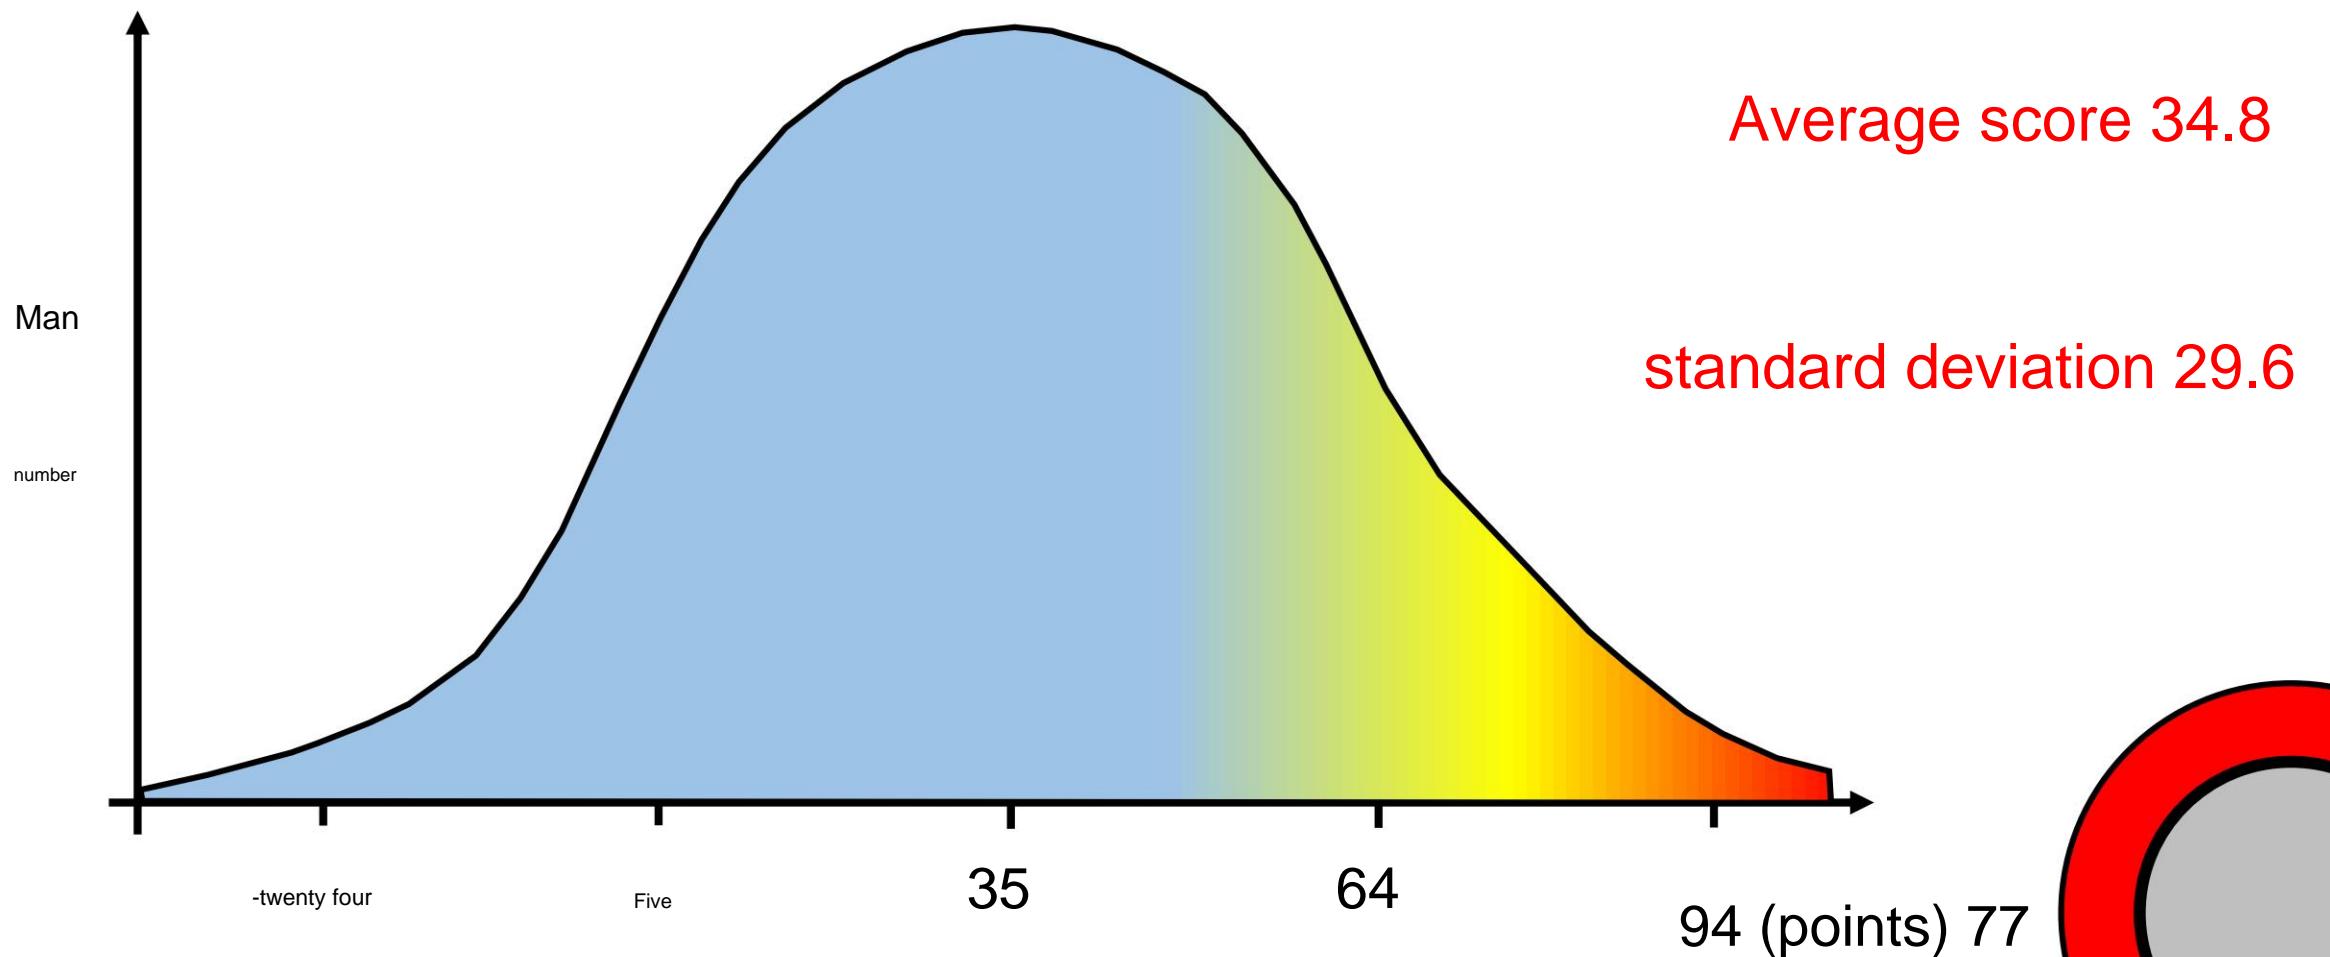

Then, you can configure a maximum value of 13 (=14-1).

Then, reduce it by 1 again according to the 85-point solution method.
